SADA
BeyondCorp Remote Access

Enable Simple and Secure Access to Internal Web Apps in Less Time

To help organizations secure their most important applications and data at a time when many workers are confined to their homes, Google Cloud has introduced BeyondCorp Remote Access. This software as a service (SaaS) solution enables responsive and easy-to-use access to internal web apps for employees and the extended workforce from virtually any device, anywhere using a web browser without a traditional VPN.

Keep Your Teams Working Wherever They Are

How — and where — people work has changed:

- It's estimated that 25-30% of the U.S. workforce will be working at home on a multiple-days-a-week basis by the end of 2021.[1]

- As the number of remote workers increases dramatically, businesses are struggling to provide their teams with access to the resources they need, with 54% of HR leaders indicating that poor technology is the biggest barrier to effective remote working.[2]

BeyondCorp Remote Access helps businesses overcome these challenges and makes accessing internal web apps as easy as opening Gmail in a browser.

Benefits

Fast Deployment
With virtually no on-premises technology to deploy, make your internal apps available around the planet in days versus months that it takes deploying a traditional remote-access VPN.

Simpler Access to Apps
Enable users to access your applications hosted in the cloud and on-premises from virtually any device, anywhere through a web browser. Make your apps more responsive and accessible around the planet with Google's private global network.

Lower Costs
Lower the total cost of ownership by offloading infrastructure tasks to the cloud and simplifying licensing with pay-as-you-go pricing.

More Control and Peace of Mind
Increase the security posture of your organization by implementing a modern, zero-trust security model that helps to ensure only authorized users from trusted devices can access a specific set of apps.

Take the Next Step

As an award-winning Google Cloud Premier Partner, SADA is here to help you solve for what's next. Contact us today to learn how we can help you implement BeyondCorp Remote Access to increase your security posture and enable remote teams. Our experts will provide you with:

Deployment Planning

Review and evaluate the current architecture and security configurations of your GCP environment to determine additional requirements for BeyondCorp Remote Access implementation.

Technical Design Creation

Capture findings and develop a technical design document outlining how to implement your new remote access solution.

Hands-on Advisory Services

Jumpstart for the your engineering team to accelerate the deployment journey.

Enterprise Support

Gain peace of mind as BeyondCorp Remote Access is supported 24/7 by our award-winning enterprise support team and Google.

About SADA

SADA is a global leader in providing business and technology consulting services that transform organizations by leveraging the entire Google Cloud portfolio. As a Google Cloud Premier Partner, SADA has proven expertise in enterprise consulting, cloud platform migration, custom application development, workplace transformation, cloud managed services, and change management.
